PROFESSIONAL SUMMARY

Senior Software Engineer in Test with 11+ years of experience, operating as quality owner across engineering organisations in Spain and Germany. I define quality engineering strategy and governance, own quality gates and release readiness with risk-based sign-off, and coordinate QA initiatives across multiple teams and projects. Trusted partner to Product, Architecture, DevOps/SRE, and Customer Support, with clear stakeholder reporting on test results, security posture, and performance readiness. Deep hands-on foundations in test infrastructure, API/performance/security testing, and IAM (OAuth 2.0, SAML, OIDC, Kerberos, Keycloak) — leading through tooling, standards, and mentoring, not just execution.

LEADERSHIP AND QUALITY GOVERNANCE

- Quality strategy and governance: defined test strategy across smoke, critical-path, and full human-flow coverage including negative cases; held >90% coverage and 1% flake rate with zero quarantines for critical release-blocking features across ~900 automated checks.
- Quality gates and release readiness: owned go/no-go inputs on monthly release with 1-week freeze (full RC regression + testing matrix with manual QA); quarantined flakes escalated to product owner for blocker vs. ship-and-patch risk decision per company policy.
- Risk assessment: classified security findings with clear blockers (high/critical and any PII-exposing issue); ran ticket-per-finding with owning dev teams fixing their own codebases and re-validated declared false positives bi-monthly.
- Cross-team QA initiatives: coordinated QA across teams on shared dashboards and stakeholder test reports; managed shared test infrastructure (Terraform + Ansible + GitLab CI) until SRE takeover; drove Sentry-to-Aikido-equivalent tooling choices and nightly ZAP scanning that kept developers unblocked.
- Stakeholder management and reporting: built unified stakeholder reports aggregating test runs, security scans, and performance metrics into a single view; held quarterly readiness reviews with Customer Support ahead of large releases and enterprise acquisitions.
- Leadership and mentoring: mentored junior QA automation engineers and developers on testing strategy, framework design, testable code, and security practices; wrote an AI test-generation skill file (verify path, focus critical paths, 10–15% test-to-code volume, coverage diff) to govern AI-assisted testing quality.
- Product, Architecture, and DevOps collaboration: partnered with SRE on capacity decisions (Kubernetes load-to-failure, Keycloak at scale, parser capacity uplifts); aligned with product owners on release risk and with architecture on contract-tested, testable interfaces.

CORE SKILLS

Quality leadership: QE strategy and governance, quality gates, release readiness and sign-off, risk assessment, stakeholder reporting, mentoring and technical guidance

Languages: Java, Python, TypeScript, SQL

Test and Quality: API / Contract Testing, RestAssured, Postman, Swagger, Selenium, Playwright, Vitest, JUnit, pytest

Performance and Security: Gatling, k6, OWASP ZAP, Snyk, GitLab Scans, Aikido

IAM and Identity: OAuth 2.0, SAML, OIDC, Kerberos, Keycloak, SSO Provisioning

CI/CD and Infrastructure: GitLab CI, Terraform, Ansible, Docker, Infrastructure as Code

Data and Tooling: PostgreSQL, Oracle, MySQL, AWS Aurora, TestRail, Qase, Jira / Confluence

PROFESSIONAL EXPERIENCE

Senior Software Engineer in Test (SDET) — Multiverse Computing

Barcelona, Spain | Oct 2025 – Jul 2026

- Owned all test and security tooling during active Next.js development as quality owner across Python (pytest) and Next.js (Playwright + Vitest) OIDC provisioning projects.
- Defined shift-left security: OWASP ZAP scans for both projects with trunk-based flow on a production-clone test environment, nightly scans and morning production deploys as the release-readiness buffer.
- Governed identity quality with a deterministic CI pipeline against Docker-pinned mock SAML/OIDC servers: Playwright job creates organisation with admin, configures SSO connector via YAML, provisions users, and verifies both sign-in flows with no drift.
- Owned performance readiness of project APIs with k6 under production-level load.
- Reported quality to stakeholders via custom QA dashboards and test reports; mentored developers on testable code and secure development practices in daily work.

Senior QA Automation Engineer — Acrolinx

Berlin, Germany | Feb 2020 – Aug 2025

- Defined and evolved test strategy for a ~600-test Java regression suite (JUnit, Selenium, Postman, RestAssured; Gatling) plus ~300-scenario Playwright React coverage (~900 checks): >90% coverage on smoke, critical paths, and human flows including negative testing; 1% flake rate.
- Owned release-readiness inputs on the monthly release train with 1-week freeze: full RC regression, testing matrix with manual QA, and risk-based quarantine decisions with the product owner.
- Governed security quality: OWASP ZAP (internal API, public customer API, dashboard spider scans), GitLab scans, Snyk — ticket per finding owned by the respective dev team, bi-monthly false-positive re-validation, high/critical and PII findings as release blockers.
- Led performance risk work on self-hosted Keycloak IAM (Datadog baselines, Kubernetes load-to-failure for capacity/DDoS readiness): surfaced backoffice parsing failure on 2,000-user onboarding and parser crash on 1,000-page documents; drove capacity fixes with SRE and quarterly enterprise-readiness reviews with Customer Support.
- Owned shared quality infrastructure (Terraform + Ansible + GitLab CI, 2020–2023) and governed database migration and integrity testing across PostgreSQL, Oracle, and microservices; validated data pipelines via Postman, Apache Airflow, and proprietary ETL tools.
- Mentored junior QA automation engineers and developers on testing strategy, framework design, and security practices; set AI-testing governance via a skill file (no-duplicate paths, critical-path focus, coverage diff) and validated GPT-wrapper output reliability.

Software Engineer — Grupo Pacifico

Barcelona, Spain | Sep 2016 – Dec 2019

- Developed and maintained a backoffice for internal stakeholders using Java (JSF + PrimeFaces), including congress registration flows with scheduling, accommodation, transport, and payment processing.
- Partnered with internal and external stakeholders across congress, event, and course products.

Software Developer — ATOS

Barcelona, Spain | Apr 2015 – Mar 2016

- Developed internal integration services and organisational tooling using Java (JSF), PHP (Laravel); maintained a legacy Cordova app with customer support.
- Contributed to REST API design with clear, testable contracts; migrated customer databases with data-integrity tests.

Software Developer — Massive Techno Promotions

Terrassa, Spain | Oct 2014 – Mar 2015

- Built bespoke web and mobile applications enabling non-technical clients to independently manage and query databases, including self-service content-update tooling.

EDUCATION

Engineering Degree, Information and Communication Technologies — Universitat Autònoma de Barcelona, Barcelona, Spain (2006 – 2009)

Associate's Degree, Information and Communication Technologies — IES Nicolau Copernic, Terrassa, Spain (2013 – 2015)

LANGUAGES

Spanish: Native. Catalan: Native. English: C2.
