PROFESSIONAL SUMMARY

Senior Software Engineer in Test with 11+ years of experience bridging software engineering and quality assurance. I specialise in architecting scalable test infrastructure, embedding automated validation into enterprise CI/CD pipelines, and driving quality strategy across the full SDLC. Deep expertise in API, performance, and security testing, with strong command of IAM protocols (OAuth 2.0, SAML, OIDC, Kerberos) and a DevSecOps-first mindset. Fluent in Java, Python, and TypeScript — with a proven track record of improving release confidence, reducing deployment risk, and providing technical guidance on quality engineering practices across cross-functional teams.

KEY ACHIEVEMENTS

- ~900 automated checks maintained across a ~600-test Java regression suite and a ~300-scenario React dashboard.
- Held >90% test coverage prioritising smoke tests, critical paths, and every human user flow including negative cases.
- 1% flake rate on regression suite, with zero quarantines for critical (release-blocking) features.
- Nightly OWASP ZAP security scans for rapid issue detection without blocking developers; custom stakeholder reports aggregating test, security, and performance metrics into a single view.

CORE SKILLS

Languages: Java, Python, TypeScript, SQL

Test and Quality: API / Contract Testing, RestAssured, Postman, Swagger, Selenium, Playwright, Vitest, JUnit, pytest

Performance and Security: Gatling, k6, OWASP ZAP, Snyk, GitLab Scans, Aikido

IAM and Identity: OAuth 2.0, SAML, OIDC, Kerberos, Keycloak, SSO Provisioning

CI/CD and Infrastructure: GitLab CI, Terraform, Ansible, Docker, Infrastructure as Code

Data and Tooling: PostgreSQL, Oracle, MySQL, AWS Aurora, TestRail, Qase, Jira / Confluence

Soft skills: Technical leadership and mentoring, cross-functional collaboration, quality strategy and DevSecOps advocacy, stakeholder communication, test-story design with dev teams

PROFESSIONAL EXPERIENCE

Senior Software Engineer in Test (SDET) — Multiverse Computing

Barcelona, Spain | Oct 2025 – Jul 2026

- Built and maintained tests for a legacy Python Django dashboard (pytest) and a Next.js dashboard (Playwright + Vitest) — both OIDC dashboards for provisioning access to internal services.
- Set up OWASP ZAP security scans for both projects, shifting security left in the release cycle.
- Owned all test and security tooling during active development of the Next.js app.
- Performance-tested both project APIs with k6 under production-level load.
- Built a CI pipeline validating everything against mock SAML and OIDC servers for repeatable, auditable identity workflows (Docker-pinned providers; Playwright job creates organisation with admin, configures SSO connector via YAML, provisions users, verifies sign-in through both flows with no drift).
- Coordinated with QA across teams on custom dashboards and stakeholder test reports.
- Mentored developers on writing testable code and embedding security practices into day-to-day development.

Senior QA Automation Engineer — Acrolinx

Berlin, Germany | Feb 2020 – Aug 2025

- Built and maintained a ~600-test regression suite for a legacy Java dashboard (JUnit, Selenium, Postman, RestAssured; Gatling for performance).
- Built and maintained Playwright + Gatling/k6 coverage for a ~300-scenario React dashboard.
- Performance-tested the self-hosted Keycloak IAM instance under production-level load (Datadog baselines, Kubernetes load-to-failure; 2,000-user onboarding broke backoffice parsing, 1,000-page documents crashed parser — fixed with SRE; quarterly readiness reviews with customer support).
- Validated AI-generated output (GPT wrapper) to ensure reliability of generated data; wrote skill file to steer AI test generation (verify path does not exist, focus critical paths, 10–15% test-to-code volume, diff coverage before/after).
- Managed infrastructure via Terraform + Ansible + GitLab pipelines.
- Set up security testing: OWASP ZAP (internal API, public customer API, dashboard spider scans), GitLab scans, and Snyk package scanning — ticket per finding with owning team fixing, false positives flagged and re-validated bi-monthly, high/critical and PII-exposing findings blocked release.
- Database migration and integrity testing across PostgreSQL, Oracle, and microservices.
- Mentored junior QA automation engineers on testing strategy, framework design, and security practices.

Software Engineer — Grupo Pacifico

Barcelona, Spain | Sep 2016 – Dec 2019

- Developed and maintained a backoffice for internal stakeholders using Java (JSF + PrimeFaces).
- Built registration forms for congresses including scheduling, accommodation, transport, and payment processing.

Software Developer — ATOS

Barcelona, Spain | Apr 2015 – Mar 2016

- Maintained a legacy Cordova application with customer support.
- Developed internal integration services and organisational tooling using Java (JSF), PHP (Laravel).
- Migrated customer databases with data integrity tests.
- Contributed to REST API design and web service development with clear, testable contracts.

Software Developer — Massive Techno Promotions

Terrassa, Spain | Oct 2014 – Mar 2015

- Built bespoke web and mobile applications enabling non-technical clients to independently manage and query their databases.
- Built a self-service tool for customers to update their own applications with content.

SECURITY TESTING APPROACH

- Ticket per finding: every flagged issue becomes a tracked ticket; owning dev team fixes in their codebase, with QA verifying coverage.
- False positives are re-tested: declared FPs flagged and re-validated every couple of months — never mark-and-forget.
- Clear release blockers: high/critical findings block deploy, as does anything exposing user private data (PII).

EDUCATION

Engineering Degree, Information and Communication Technologies — Universitat Autònoma de Barcelona, Barcelona, Spain (2006 – 2009)

Associate's Degree, Information and Communication Technologies — IES Nicolau Copernic, Terrassa, Spain (2013 – 2015)

LANGUAGES

Spanish: Native. Catalan: Native. English: C2.
